

Student name: Mst Sondha Khatun

Department:CMT

Semester : 4<sup>th</sup>

Shift :2<sup>nd</sup>

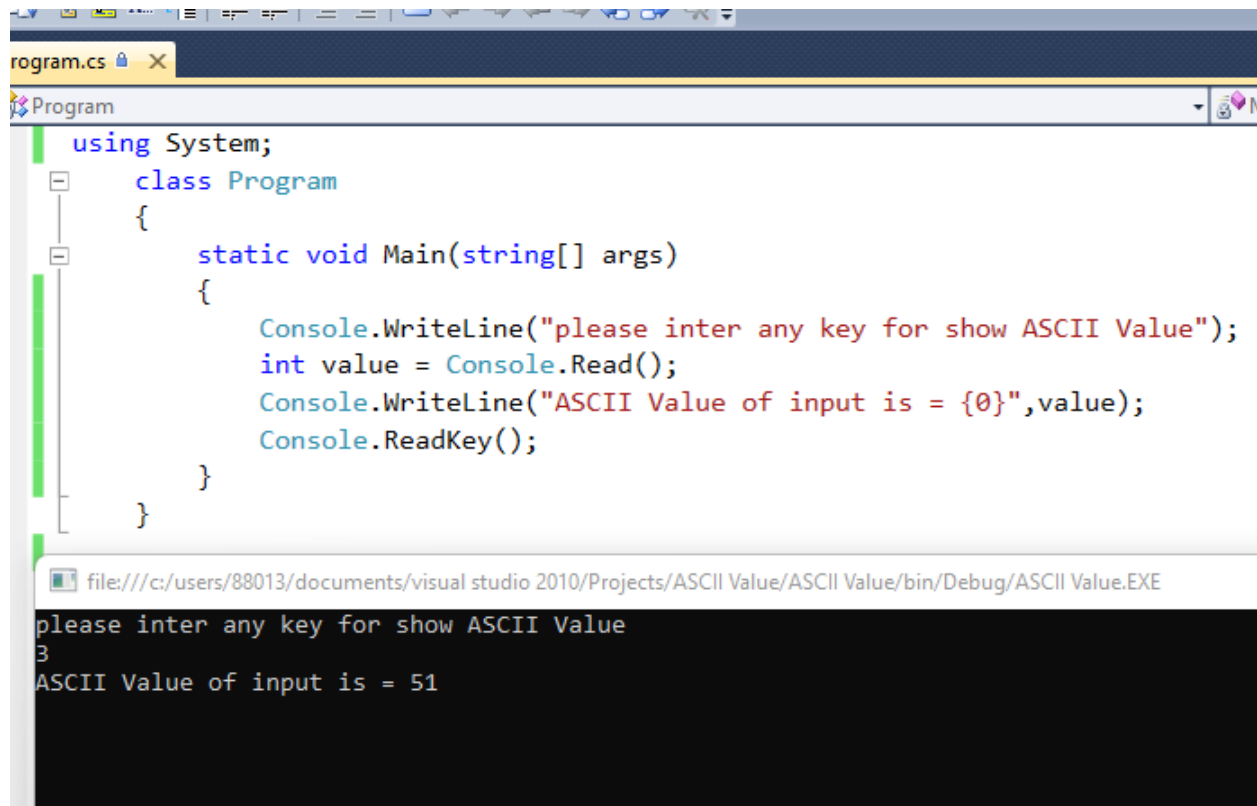

Roll:420654

Subject name : Object Oriented Programming

Subject Code : 66641

Job no :17

Job name : ASCII value

The screenshot displays the Visual Studio 2010 IDE. The top window, titled 'Program.cs', contains the following C# code:

```
using System;
class Program
{
    static void Main(string[] args)
    {
        Console.WriteLine("please inter any key for show ASCII Value");
        int value = Console.Read();
        Console.WriteLine("ASCII Value of input is = {0}",value);
        Console.ReadKey();
    }
}
```

The bottom window shows the console output of the application. The title bar indicates the file path: 'file:///c:/users/88013/documents/visual studio 2010/Projects/ASCII Value/ASCII Value/bin/Debug/ASCII Value.EXE'. The console text is as follows:

```
please inter any key for show ASCII Value
3
ASCII Value of input is = 51
```
